

LearnSphere: Personalized Learning Management Platform

ABSTRACT

LearnSphere is a Spring Boot web application providing a comprehensive Learning Management System. It integrates student profiles, course video playlists, MCQ-based quizzes with auto-grading, academic result tracking with GPA/CGPA calculation, and role-based dashboards for Students, Faculty, and Administrators. Built with Spring Boot 3.2.5, Thymeleaf, Spring Security 6, and H2 database, it automates academic management and provides performance insights through a responsive dark-themed interface.

INTRODUCTION

Traditional academic management relies on fragmented manual systems for course delivery, student assessments, and performance tracking. Students lack centralized platforms for accessing courses, tracking performance, and taking assessments. LearnSphere addresses these challenges by providing an integrated web-based platform unifying learning resources, assessments, and academic analytics into one role-based system.

OBJECTIVES

- Develop a unified Spring Boot platform for learning and academic management.
- Implement role-based access for Students, Faculty, and Admin with Spring Security.
- Enable MCQ quiz creation with auto-grading and performance analytics.
- Build academic results dashboard with GPA/CGPA calculation.
- Provide course video playlist management with YouTube integration.

METHODS & MATERIALS

SYSTEM ARCHITECTURE

RESULTS

Metric	Result
JPA Entities	12 Domain Models
Source Files	35 (0 Compilation Errors)
Startup Time	9.9 seconds
Roles	3 (Student / Faculty / Admin)
Courses & Videos	5 Courses, 27 YouTube Embeds
Quizzes & Questions	4 Quizzes, 29 MCQs
Academic Records	60 Results (3 Semesters, 15 Subjects)
Grade Scale	O, A+, A, B+, B, C, F with GPA

DISCUSSION

- Spring Boot + Thymeleaf enables rapid full-stack Java development.
- JPA/Hibernate automates schema generation from entity annotations.
- Chart.js provides interactive semester-wise performance visualization.
- BCrypt ensures secure credential storage.
- H2 in-memory database enables zero-configuration deployment.
- Dark-themed UI improves readability and modern aesthetics.

CONCLUSION

LearnSphere successfully delivers a complete LMS platform integrating course management, quiz assessment with auto-grading, and academic analytics with GPA/CGPA computation. Built on Spring Boot's layered MVC architecture with Spring Security for role-based access, it compiles 35 files with zero errors and starts in under 10 seconds. The responsive dark-themed interface provides an engaging learning experience for students and efficient management tools for faculty.

FUTURE ENHANCEMENTS

- Migrate to MySQL/PostgreSQL for persistent storage.
- Add JUnit 5 automated test suite with JaCoCo coverage.
- Integrate AI-powered quiz generation from course content.
- Implement real-time video conferencing (WebRTC).
- Deploy on AWS/Azure cloud with CI/CD pipeline.
- Develop Android companion app using Kotlin.
